HIGH VOLUME CASEWORK

Delivering quality products, on-time
and to your specifications.

Institutional Casework

Schools, Governments, Hospitals and More:

Our 30 + years of experience adhering to strict regulations and guidelines, provides confidence in our manufacturing process. Our materials meet LEED and CARB II designations, ensuring medical compliance and environmental sensitivity.

Residential Casework

Kitchens, Bathrooms and Closets:

Our new, state of the art equipment efficiently produces high volumes. With quality assurance in mind, we can deliver your project fully assembled, leading to quick and efficient installations

Commercial Casework

Standardized Models for the Entire Project:

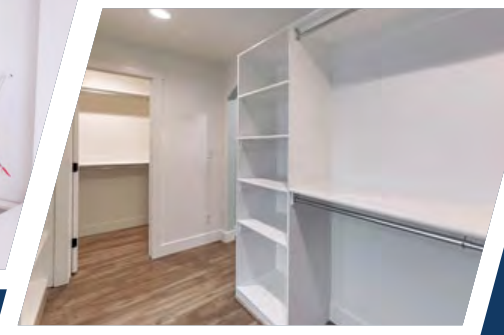

Every commercial space is easily produced on time and on budget. Your designs are manufactured to your specifications by our experienced team. Custom colors and layouts enable you to receive your final design with ease and confidence.

Architectural Casework

A Solid Framework to Build Upon:

High volume casework enables you to effectively deliver consistent designs for standardized cupboards, cabinetry, bookcases etc. Specializing in wood and dowel or CAM fasteners, strength and longevity are critical to our manufacturing process.

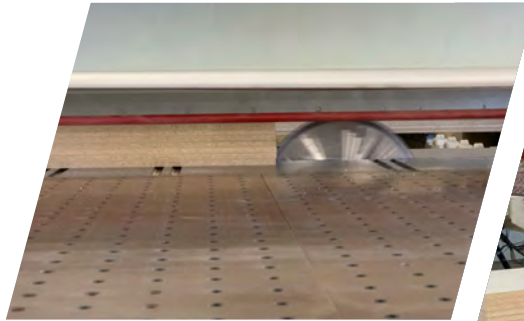

PANEL PROCESSING

Cut-to-size projects made possible with state of the art equipment!

Panel Cutting

Meeting All Your Cutting Needs!

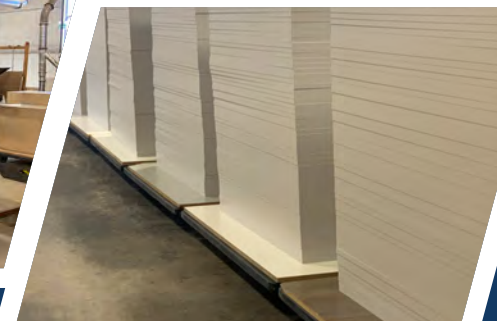

Our highly automated equipment can easily process high volumes of melamine, particleboard MDF, or plastic lifts up to 5' X 9' in size. Custom blades are available for cutting specialty veneers or solid woods.

Edge Banding

A Polished Touch to Strengthen Your Product!

In over 30 years we have perfectly matched a multitude of colors and finishes to the final product, using ABS, PVC or wood edge tapes. Our equipment can quickly process straight or rounded corners with tapes ranging from 0.0018" to 3mm thick.

Routing & Boring

Quality Through Precision!

Full CNC software can handle 3 axis patterns on multiple machines, without restrictions on material thickness. Capable of processing sheets of sizes up to 8' X 3' using various tools for routing and boring. Our equipment allows for 3mm - 35mm diameter holes, Brad-point or through holes, blade groove and curved millwork.

Dowel Insertion

Stand the Test of Time!

Dowels ensure the longevity of the component as well as proper alignment. With diameters ranging from 6 - 10mm, various dowel protrusions, and plain or pre-glued dowels, our automated equipment can process high volume efficiently by applying the dowels directly after drilling.

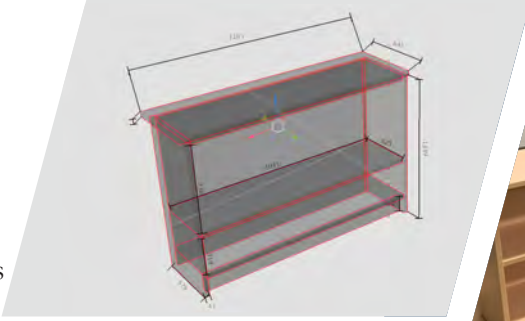

OPERATIONAL SERVICES

We offer a wide range of services to efficiently complete your projects.

Project Design

Bring Ideas to Life!

With over 30+ years of experience we have helped many companies turn designs into working components while considering material and machine efficiencies. Reducing production costs does not need to impact quality, strength and durability.

Label Application

Consistency is Key!

Whether used for branding, tracking or specialized details, labels may be required on various parts. We can quickly process the label application automatically, on one or both sides of a flat component at the same time. Custom procedures can also be developed to manually apply the labels onto non-conforming surfaces.

Product Assembly

Dedicated Crew!

Using Jake, Connor & Crew in-house dedicated employees we implement custom specialized practices to ensure efficient assembly work flows and an outstanding final product. Various packaging options are available to optimize security and freight costs.

Order Delivery

Jake's Freight Systems!

Closely working with our in-house logistics brokerage, allows us to offer expedited solutions to meet your requirements. Longstanding relationships with multiple carriers offers reliable and cost effective options.
